ThunderFab's New Toys

After celebrating ThunderFab's first anniversary, the shop acquired a new Edwards Ironworker, amongst other new tools. This additional equipment has complemented the machine line-up by dramatically increasing the shop's production of structural steel. ThunderFab has busily been fabricating structural steel for substation service companies. In addition to broadening ThunderFab's offerings into the next year, ThunderFab continues to produce classifier blades for pulverizers, orifice plates, venturis, coupling guards, probes (pitot tubes),

complex shafts and geometric shapes, base plates, housings, fixtures, flow nozzles, bushings, axles, and a variety of custom work.

More to Come...

The big excitement, however, is coming soon: a state-of-the-art Haas SL20L CNC Lathe. This live tooling, all-in-one machine with GibbsCAM software will give ThunderFab's shop a huge advantage over smaller shops in the area with increased precision, production time, and competitive pricing. The boys can't wait!

Custom Fabrication

Precision Welding & Machining

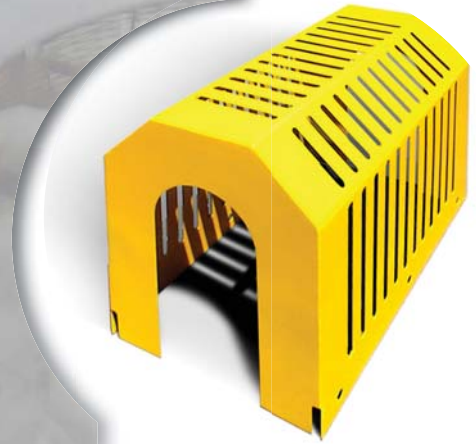

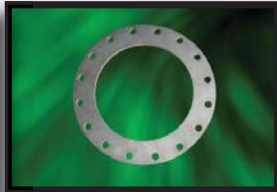

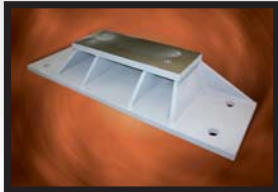

ThunderFab is a precision machine and fabrication shop located in Birmingham, Alabama, specializing in the development and manufacture of industrial machine components. The talented team at ThunderFab is provides services to noncommercial individuals for custom projects, and is equipped to handle any size project!

Equipment:

- Mazak Vertical CNC Mill
- IKGAI CNC Turning Center
- CNC WaterJet Dynapath Control
- Monarch Lathe
- Bridgeport Milling Machine
- Hydraulic Saw
- Radial Drill Press
- COMING SOON: Haas SL20L CNC Lathe with GibbsCAM

Services:

- CNC Vertical Machining, Turning, and WaterJet Cutting
- Manual Machining
- MIG and TIG Welding
- Brazing
- Engraving
- AutoCAD Design
